Unit 1

The Uncanny Valley

不気味の谷

Scanning for Useful Words & Phrases

本文から以下の文を探し、空所の語を書きなさい。さらに文全体の意味を言いなさい。

- 1. Such an object both _____ and _____ us until, eventually we reject it altogether.
- 2. Jentsch said that an uncanny object _____ two different feelings.
- 3. What ______ the Uncanny Valley reaction?
- 4. Some have ______ it to the feeling we get when we look at the dead.
- 5. Evolutionary psychology ______ another possible explanation.
- 6. Today, designers of video games ______ take Professor Mori's advice.

Skimming for the Mai n Ideas

以下の質問に日本語で答え、本文の各パラグラフの主題を捉えなさい。

- 1. What kinds of feeling does an uncanny object cause?
- 2. What is the Uncanny Valley?
- 3. What happens to the observer as an object becomes more human-like?
- 4. Is there more than one possible explanation for the Uncanny Valley?
- 5. What other scientific field can help explain why the Uncanny Valley takes place?
- 6. What was Dr. Mori's conclusion?

¹ Something that is uncanny is especially disturbing. It causes feelings of dread or disgust, as if it were not quite human or from another world. Sigmund Freud, the Austrian psychoanalyst, described the uncanny in a 1919 essay. It is the feeling we experience when we see an object that is both familiar and foreign. Such an object both attracts and repulses us until, eventually, we reject it altogether.

The Uncanny Valley is a theory about how we feel when we see a humanlike robot or character in a computer game. The concept was formulated in the 1970s by Japanese roboticist Masahiro Mori. Dr. Mori found the inspiration for his ideas in an essay by Ernst Jentsch. Jentsch said that an uncanny object gives rise to two different feelings. The first is doubt about whether an animate being is really alive. The second is the feeling that a lifeless object might actually be alive. Dr. Mori developed Jentsch's hypotheses into a full-fledged theory.

3 The phenomenon is best 15 explained as follows: When an object is only slightly life-like, its more human features and characteristics stand out to the observer. This creates emotional 20 sympathy for it. But the more human the object becomes, the more apparent its "zombie-like" features become. These generate feelings of weirdness and disgust. 25 When plotted on a graph, this point takes the shape of a steep, deep valley.

⁴ What causes the Uncanny Valley reaction? Various ideas have been suggested. Some have compared it to the feeling we get when we look at the dead. The flaws of humanoid robots remind us of the "creepy" imperfections of a corpse. Another possible explanation is that a robot's flaws make us think of abnormalities caused by physical and mental disability. These have always caused an instinctive feeling of fear and disgust in us.

⁵ Evolutionary psychology offers another possible explanation. Some

robots or animated computer game characters are so life-like that they seem to be part of the human species. But evolution has given us specific "survival" mechanisms for recognizing something "wrong" in other humans' faces. Thus, a life-like, computer-generated entity's slight differences from the real tell us that something isn't quite right about it. These flaws could indicate genetic disorders or disease. This would mean that the entity is unsuitable for reproduction. It could even be a threat to the human gene pool. Most people find the idea of sexual activity between human-like characters particularly disgusting. This evolutionary response could help explain why.

⁶ Dr. Mori reached the conclusion that robot designers should not work too hard to make their creations too human in appearance. Today, designers of video games might well take Professor Mori's advice. The more realistic these games become, the more likely they are to fall into the Uncanny Valley. As Clive Thompson of Slate magazine says: "The Uncanny Valley can make games less interesting." Just when gamers get caught up in the action, they begin to detect flaws in their avatar. They begin to see it as a "strange parody of humanity." It is at that moment, says Thompson, that gamers become disgusted and lose interest in the game itself.

Looking into the Paragraphs

第2パラグラフは「定義のパラグラフ」です。以下の質問に答えながら、パラグラフ構造を確認しなさい。

- 1. トピックセンテンスに下線を引きなさい。
- 2. the Uncanny Valleyを30字以内の日本語で定義しなさい。
- 3. Jentschによると、人は不気味なものに遭遇すると2つの異なった疑念(doubt)を抱くという。その2つを明確に日本語で表しなさい。
 - 1) _____

2)

4. 上の答えを参考にしながら、このパラグラフを100字の日本語で要約しなさい。

				(

- 5. 第2パラグラフ以外で「定義のパラグラフ」を指摘し、トピックセンテンスに下線を引 きなさい。複数ある場合はすべて指摘しなさい。
- 6. 上のパラグラフについて、構造を確認した上で、100字の日本語で要約しなさい。複数 ある場合は、任意の一つを選び要約しなさい。

Passage Summary

空所に適語を入れ、本文全体の要約文を完成させなさい。またCDを聞いて答えを確認し、音読しなさい。

Dr. Mori, who is an expert in robotics, developed a () about how we feel when we see robots that are human-like in () and movement. This concept is known as the Uncanny Valley, which states that there exists a point where we begin feel to disgusted because a robot looks almost (), but at the same time looks (). The () can be explained in various ways.

uncanny appearance human phenomenon theory
